

BUCKETS

VIRNIG SKELETON ROCK BUCKETS

In the early 2000's, most rock buckets had a solid, vertical back and used round shaft for the bottom tines. Others used round shaft for the back and sides as well. The design worked, but was heavy and expensive. For months, brothers Dean Virnig (owner) and Darin Virnig (head engineer) kicked around ideas. One quiet Friday afternoon, they changed the way skid steer rock buckets were made.

The tines were cut from Grade 80 flat steel and oriented vertically to give the bucket necessary open bottom, back, and sides. Shaping it like a dirt bucket and adding a rock dam in the middle meant easy use for any operator. Strategic gusseting and one-piece tines gave it strength without excessive weight.

Over decades later, it is safe to say the idea has stuck.

Others have tried to copy it, but there is only one Original Skeleton Rock Bucket.

V40 SKELETON ROCK BUCKET

Available widths
66", 72" & 84"

Pick up rocks and leave dirt behind. Excels with smaller skid steers and track loaders.

V50 SKELETON ROCK BUCKET

Available widths
60", 66", 72", 78" & 84"

The Original Skeleton Rock Bucket, proving its durability since the early 2000's.

V60 SKELETON ROCK BUCKET

Available widths
72", 78", 84" & 90"

The toughest and heaviest rock bucket designed for the most demanding applications.
